DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a polygon mirror scanner, classified in class 359, subclass 198.
- II. Claims 14-18, drawn to a bearing device having a convex cylindrical shape, classified in class 359, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because polygon mirror scanner does not have the claims languages of other group, "the thrust bearing fixed on the thrust groove wherein the radial bearing is inserted into the cylindrical central hole

Art Unit: 2872

in the stator yoke, the radial bearing is attached to the cylindrical bearing building screw, and the building groove on the top surface of the radial bearing is a tool groove when the radial bearing is attached to the circumferential screw and when the screws formed on the radial bearing are attached to the screw formed on the stator yoke, the radial bearing is easily detachable from the stator yoke". The subcombination has separate utility such as it does not have to be used in a polygon mirror scanner.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
